Claims 14-113 are pending. The 35 U.S.C. 103 rejection is withdrawn in view of Applicant's

remarks and amendments.

Claim Objections

1. Claims 14-113 are objected to because of the following informalities: The independent

claims include words in quotation marks. The quotation marks should be removed. Dependent

claims are objected to as they include all the limitations of the independent claims. Appropriate

correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 27-39, 53-65, 78-89 and 102-113 are rejected under 35 U.S.C. 112, second

paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject

matter which applicant regards as the invention.

4. Claim 27 recites that a method of photoinducing a property in a structure and a method of

using the structure (see lines 1-3). This is inappropriate because the claim is drawn to both a

method of making a structure and a method of using the structure. These are distinct inventions

and cannot be claimed in the same claim. Claims 28-39 are rejected as being dependent on claim

27. Claims 53, 78 and 102 recite similar limitations and dependent claims dependent on claims

53, 78 and 102 are rejected because of their dependency. Correction is required.

Art Unit: 1756

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 14-26, 40-52 and 90-101 are rejected under 35 U.S.C. 102(e) as being anticipated by US# 6,440,638 to Golz et al.

Golz teaches a method of planarizing a layer of photoresist on a substrate by exposing the resist to radiation that the resist is sensitive to. Therefore, Golz teaches photoinducing optical properties into a material that comprises photosensitive molecular matter. The radiation is directed at the layer of photoresist at an oblique angle (Abstract; col. 5, lines 10-60). Therefore, Golz teaches that the write beams are parallel and are oblique relative to the structure. It is inherent that the structure is suitable for propagating read beams and presenting properties caused by pump beams. The present claims that recite that the structure is "suitable" for particular tasks, such as propagating read beams and presenting properties caused by pump beams, are not materially limited by those tasks, i.e., those tasks need not be performed. The figures also show mutually coherent write light beams. Light beams have multiple photons. Golz teaches that various parameters relating to the exposure of the resist may be varied. Golz

Art Unit: 1756

teaches varying the various parameters recited in the claims (col. 5, line 60 - col. 6, line 35). Golz also teaches use of a mask.

Allowable Subject Matter

- 7. Claims 27-39, 53-65, 78-89 and 102-113 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.
- 8. Claims 66-77 are objected to but would be allowable if amended to overcome the claim objections set forth in this Office action.
- 9. The prior art does not teach or suggest that pump beams are caused or that an optical effect giving rise to a property in read beams is generated.

Response to Arguments

10. Applicant's arguments with respect to the claim have been considered but are most in view of the new ground(s) of rejection.

Conclusion

11. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Saleha Mohamedulla whose telephone number is (571) 272-1387. The Examiner can normally be reached Monday-Friday, from 8:00 AM to 4:30 PM.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Mark Huff, can be reached on (571) 272-1385. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
